Sample Response (Encrypted data) 4

Sample Response (Decrypted data) 5

1. Introduction

Samagra Number serves as an identity and address proof across the state. It applies and avails benefits of different State Government services using Samagra. Through the overall social security program, the aim of the schemes run by the state government was to make the access to the beneficiaries easier and easier and their targeted results effective and simplification of the schemes.

MPSEDC has developed a standard API to facilitate the MP Government department to avail the services of Samagra. Department can use these APIs to get the demographic, education and school details of the MP residents and basic information of other state residents using Samagra Id.

2. Get Details of a Member using Samagra ID

URL of the services

Staging:

https://webservicesstaging.samagra.gov.in/CommonWeb/CommonApi.svc/G3tSamagraD3tails

Production:

https://webservices.samagra.gov.in/CommonWeb/CommonApi.svc/G3tSamagraD3tails

Post Data

```
{
        "MemberId" : "member_id_of_the_citizen",
        "serviceCode" : "service_code",
        "deptCode" : "department_code",
        "TimeStamp" : "timestamp_in_ddMMyyyyHHmmss_format",
        "applicationCode" : "application_code ",
        "Token" : "token_generated_by_application"
}
```

Request Element and Attributes

MemberId: Member Id of the citizen for which details are required.
Data Type: String

serviceCode: Each service has a unique code and service code of the service will be shared separately.
Data Type: String

deptCode: Each department has a unique code. Department code will be shared, once the department is on-boarded in Samagra application.
Data Type: String

TimeStamp: Current timestamp of system. Format of the timestamp must be <ddMMyyyyHHmmss>.
Data Type: String

applicationCode: Each application of the department has a unique code generated by the Samagra and unique code of the application will be shared separately.
Data Type: String

Token: Hash value of the combination of TimeStamp and key. Key will be shared, once the department is on-boarded in Samagra application.
Data Type: String

3. Code for generating value of token element:

```
string TimeStamp = DateTime.Now.ToString(ddMMyyyyHHmmss);
string key = "";
string tokenChk = CalculateMD5Hash(TimeStamp + key);

public string CalculateMD5Hash(string input)
{
        MD5 md5 = System.Security.Cryptography.MD5.Create();
        byte[] inputBytes = System.Text.Encoding.ASCII.GetBytes(input);
        byte[] hash = md5.ComputeHash(inputBytes);

        StringBuilder sb = new StringBuilder();
        for (int i = 0; i < hash.Length; i++)
        {
                sb.Append(hash[i].ToString("X2"));
        }
        return sb.ToString();
}
```

4. Code for decrypting data:

```
    public string Decrypt1(string data)
  {
    RijndaelManaged rijndaelCipher = new RijndaelManaged();
    rijndaelCipher.Mode = CipherMode.CBC;
    rijndaelCipher.Padding = PaddingMode.PKCS7;

    rijndaelCipher.KeySize = 0x80;
    rijndaelCipher.BlockSize = 0x80;
    byte[] encryptedData = Convert.FromBase64String(data);
    byte[] pwdBytes = Encoding.UTF8.GetBytes(_key);
    byte[] keyBytes = new byte[0x10];
    int len = pwdBytes.Length;

    if (len > keyBytes.Length)
    {
      len = keyBytes.Length;
    }

    Array.Copy(pwdBytes, keyBytes, len);
```

```
    rijndaelCipher.Key = keyBytes;
    rijndaelCipher.IV = keyBytes;
    byte[] plainText = rijndaelCipher.CreateDecryptor().TransformFinalBlock
            (encryptedData, 0, encryptedData.Length);
    return Encoding.UTF8.GetString(plainText);
  }
```

Response Element and Attributes

Status: Status 1 (success) will be shared when information of the citizen is available in Samagra else 0 (failed) will be shared.
Data Type: int

ErrCode: Error code will share if any error comes while fetching information of the citizen.
Data Type: String

data: Encrypted data of the citizen will be shared if citizen information available in Samagra else error message will be shared.
Data Type: String

Msg: Success will be return if request is successful else error message will be shared.
Data Type: String

RequestIP: IP address of the server from where request has been initiated. This IP address is required for whitelisting in Samagra environment.
Data Type: String

5. Sample JSON of Request and Response

Request JSON

```
{
        "MemberId" : " 16744XXXX ",
        "serviceCode" : "WSCOMMMDS10003",
        "deptCode" : "DEPT0001",
        "TimeStamp" : "04022022165841",
        "applicationCode" : "APPCODE",
        "Token" : "128DDA97E9BFD9824CA8CE7ED8963FCC"
}
```

Sample Response (Encrypted data)
