

PARAKH Portal Enhancement Requirement Document

Action Taken Report (ATR) Module Based on Inspection Scores & Inspector Feedback

1. Objective

To enable tracking and closure of deficiencies identified during hostel & Schools inspections conducted in PARAKH.

The system should automatically detect issues based on scores and inspector remarks, and create an **Action Taken workflow** where:

- **District level users enter action taken, and**
 - **Divisional Officer verifies/approves closure.**
-

2. Source Data (Existing PARAKH Inspections)

Inspection Excel contains:

- ✓ Hostel/School details
- ✓ Inspection metadata
- ✓ Parameter-wise scores (0, 1,3, 5 etc.)
- ✓ Free text remarks/comments
- ✓ Overall score & attendance information

These fields are used to identify deficiencies.

3. ATR Trigger Rules

3.1 Primary Rule

- ➡ ATR issue must be generated **only when score < 5**

3.2 Secondary Rule – Remarks Driven Issue

If inspector remarks indicate:

- ✓ deficiency
- ✓ facility gap
- ✓ problem/suggestion

→ System should allow generating a separate ATR issue **even if score is 5 or missing**.

Examples:

- “बिस्तर सामग्री नहीं”
- “मेस में समय पर खाना नहीं मिलता”
- “रक्षक उपलब्ध नहीं”
- “बालिकाओं हेतु सुरक्षा व्यवस्था कमजोर”

So ATR issues = **Score-based + Remarks-based**

4. ATR Process Flow to Build

Step 1: Auto Issue Identification (System-driven)

On each inspection sync/approval:

System automatically:

- Reads score
- If score < 5 → creates ATR issue or based on remark and feedback system should allow users to create ATR issue based on feedback and remark

Each ATR record captures:

- Inspection ID
- Hostel ID/School ID

- Parameter category & name
 - Score
 - Inspector feedback text
 - Issue description (auto-assembled)
 - Severity (low,medium,high)
-

Step 2: District Level ATR Entry

District nodal user sees list of ATR issues generated for their hostels.

District officer enters:

- Action taken description
- Date of action
- Status:
 - Not started
 - In progress
 - Completed (Pending Verification)
- Evidence upload:
 - Photos(geo-tag)
 - Documents (completion certificate, order etc.)

District level completes and submits ATR.

Step 3: Divisional Level Verification

Divisional Officer dashboard shows:

- Issues submitted by districts
- Filters to review by district/block/hostel/parameter/severity

Divisional officer can:

- ✓ Approve & Close
 - ✓ Reject & Send Back (with remarks for rework)
-

Step 4: Closure Tracking & Improvement

Once divisional officer closes issue:

- Issue status becomes “Closed”
- Closure date and verifying authority stored
- Option to link follow-up inspection for score improvement tracking

If reopened → status becomes “Rework Required”

5. System Screens to be Built

A. ATR Dashboard (State & Division level)

KPIs:

- Total inspections
- Total deficiencies generated
- District-wise pending vs closed
- Monthly closure trends
- Parameter-wise common issues

B. ATR Issue List (District level)

Filters:

- District
- Block
- Hostel type
- Severity
- Status

Columns:

- Inspection date
- Parameter name
- Score (<5)
- Inspector remark

- Status

District user clicks **“Update Action Taken”**.

C. Action Entry Form (District)

Shows:

- Parameter
- Original observation text
- Score

District user enters:

- Action taken
- Date
- Status
- Evidence upload

Submit → moves to divisional verification queue.

D. Verification Screen (Divisional User)

Shows:

- ATR issues submitted for verification
- Approve / Reject / Send Back with remarks

6. Reports Required

District ATR Register

- District-wise ATR entries & closure status

Divisional ATR Scorecard

- Ranking based on compliance % and ageing

Parameter Deficiency Report

- Top 10 recurring deficiencies

Follow-up Inspection Report

- Before score → After score (where applicable)
-
-

7. Acceptance Criteria

- ✓ ATR generated only when score < 5 or remarks indicate deficiency
- ✓ District enters action response
- ✓ Divisional officer verifies and closes
- ✓ Evidence-based closure
- ✓ Real-time dashboards
